Ethereum could eventually surpass Bitcoin’s market share in a similar manner to how US equities overtook gold 54 years ago, when the US abandoned the gold standard, according to BitMine chair Tom Lee.

Blockchain security is the foundation and guarantee for the development of blockchain technology. Due to the complexity of blockchain systems, their security issues involve multiple aspects such as cryptography, consensus mechanisms, and network security. Common security threats include 51% attacks, smart contract vulnerabilities, private key leakage, etc. To ensure the security of blockchain systems, measures need to be taken from multiple levels such as technology, management, and law. With the widespread application of blockchain technology, blockchain security will become increasingly important and will attract more professional talents to engage in it.

After the 2014 Mt. Gox hack, the first hack explored in “Code is Law,” the DAO hack is probably the most famous in crypto’s history. The DAO was the first decentralized autonomous organization, becoming an eponym in the process. In 2016, when Ethereum was still young, it was one of the first decentralized applications to gain traction.
