With Grok 4, you can automate the first round of filtering — for example, summarizing white papers, spotting tokenomics red flags and checking liquidity. By the time you get to manual research, you are already down to the 10% of projects that actually deserve your attention.

The technique targets a single qubit, the basic unit of information storage in quantum computing, with a precise signal, causing it to react. The process is then reversed, allowing the researchers to measure the “echo” or signal that bounces

back, Google said.

Looking further out, Dawson observed a put volume clustering around the \$4,000 and \$5,000 strikes for the Sept. 26 expiry, indicating an expectation for a more moderate correction by month's end.
