The story follows founder Griff Green's perspective as the early instantiation of decentralized governance rises, raises \$160 million and then, at once, falls victim to a devastating hack.

Android users beware: A newly discovered piece of malware is targeting smartphone crypto wallets. Uncovered by fraud prevention firm ThreatFabric, the "Crocodilus" mobile banking trojan employs tools including remote control, black screen overlays, and advanced data harvesting through accessibility logging to trick crypto holders into handing over their wallet seed phrase. The malware "is masquerading as crypto-related apps and involves specific social engineering

CryptoQuant blockchain analyst JA_Maartun said market data shows that Bitcoin in longterm holder wallets has been steadily moving into ETFs.

When it comes to crypto investing, such an attitude could translate into a "readiness to engage with new and unconventional assets," he added.

Digital wallets are essential tools for entering the blockchain world. They are not only used to store cryptocurrencies but also to manage users' digital identities and interact with DApps. According to different storage methods, digital wallets can be divided into hardware wallets, software wallets, and paper wallets. Among them, hardware wallets have the highest security but are less convenient to use; software wallets (including desktop wallets, mobile wallets, and web wallets) are convenient to use but have relatively lower security. Choosing a suitable digital wallet requires balancing security and convenience according to individual needs and asset scale.
