“While differentiating between this content is a technical challenge for search engines, we’re making ongoing improvements to better surface legitimate content and downrank explicit fake content,” Google said. In regards to CSAM, the Google spokesperson said the company takes this subject very seriously and has dedicated an entire team specially to combat this illegal content.

A high hash rate is important because it means more computing power is being used to keep the cryptocurrency’s network secure. And the more computing power used, the harder it is for attackers to take control of more than 50% of the Bitcoin network.

Robinhood has expanded its tokenization initiative on the Arbitrum blockchain, deploying 80 new stock tokens in the past few days and bringing the total number of tokenized assets close to 500.

Some analysts speculated that up to 99% of creditors might sell once they received their share. But when repayments actually began, there was “no significant spike” in trading volume, according to CryptoQuant founder Ki Young Ju.

The exponential moving averages, or EMAs, paint an even prettier picture. These weighted averages give more importance to recent price action, helping identify dynamic support and resistance. For BNB, the setup is textbook: the 50-day EMA rises beneath current price around \$1,050-\$1,070, providing a cushion for pullbacks. The 200-day EMA sits lower still, confirming the longer-term uptrend.

Without real demand, any breakout attempt might lack the strength required to push ETH above key levels.
