Liquidation context: After a fast wick and cascade, avoid chasing. Snapbacks are common once forced flows clear.

China produces over 90% of the world's rare earth minerals and rare earth magnets used in electronics manufacturing, according to Reuters. The announced export restrictions on rare earths won't just reshape supply chains, but the entire global monetary order, Gromen said.

Part of this growth is being driven by improvements in underlying blockchain infrastructure, with some networks now processing over 3,400 transactions per second, a more than 100-fold increase in throughput over the past five years.

A high hash rate is important because it means more computing power is being used to keep the cryptocurrency's network secure. And the more computing power used, the harder it is for attackers to take control of more than 50% of the Bitcoin network.
