Bitcoin, Ethereum and XRP Bleed as Traders Weigh End of 4-Year Cycle

Aave's decentralized autonomous organization (DAO) introduced a proposal to create a long-term, protocol-funded buyback program that would use up to \$50 million in annual revenue to repurchase Aave tokens.

The exponential moving averages, or EMAs, paint an even prettier picture. These weighted averages give more importance to recent price action, helping identify dynamic support and resistance. For BNB, the setup is textbook: the 50-day EMA rises beneath current price around \$1,050-\$1,070, providing a cushion for pullbacks. The 200-day EMA sits lower still, confirming the longer-term uptrend.

"Broadly, Ethereum posturing is bearish and signalling for a mild correction by the end of the month," Dawson said, a stance he contrasts with a moderately bullish outlook for Bitcoin, according to Decrypt's previous report.

"The addition of licensed NHL markets could accelerate the platforms' growth trajectory in Q4, as official league partnerships bring credibility and attract new users," Jamie Elkaleh, chief marketing officer at Bitget Wallet, told Decrypt.

It argued that Aave's treasury had enough surplus cash to execute the buyback without compromising its operational expenses or reserves.
