The emergence of smart contracts has brought revolutionary breakthroughs to blockchain technology. These self-executing computer programs can automatically trigger corresponding operations when preset conditions are met, without manual intervention. Smart contracts not only improve transaction efficiency but also greatly reduce trust costs. Currently, smart contracts have been widely applied in decentralized finance (DeFi), digital identity authentication, the Internet of Things, and other fields. With the continuous development of technology, the functions of smart contracts will become more powerful, and application scenarios will become more abundant.

With Google's new update, when a request to remove non-consensual deepfake websites found in a search is received, Google will also work to filter similar search results that include the name of the person being impersonated.

That infrastructure is now being extended with their acquisition of 21Shares as a "natural next step" to strengthen market efficiency, Yarlagadda claimed, adding that the move is a "deliberate, long-term investment in building durable enterprise value across market cycles."

Historically, Bitcoin's price movements have followed a four-year cycle, often soaring one year after its halving—the quadrennial slashing of BTC miner rewards that's baked into Bitcoin's code—and then crashing soon after.

The NHL's endorsement lends credibility to platforms that have operated in a regulatory gray area while potentially paving the way for other major leagues to follow.
