Comprehensive Guide to is binance having network issues today

The cryptocurrency market in 2025 is increasingly being shaped by institutional adoption and the rise of stablecoins, underscoring rapid advances in blockchain technology capable of supporting broader mainstream use, according to venture capital firm Andreessen Horowitz (a16z).

“With NAVs now having fully round-tripped, retail investors have lost billions — and many likely lack the conviction to keep adding to their positions.”

“The scale of institutional activity is particularly notable,” Chainalysis said, referring to large transfers — those exceeding \$10 million — surging 86% year-over-year (YoY). The surge pace is nearly double the 44% growth observed in the rest of Europe, it added.

The emergence of smart contracts has brought revolutionary breakthroughs to blockchain technology. These self-executing computer programs can automatically trigger corresponding operations when preset conditions are met, without manual intervention. Smart contracts not only improve transaction efficiency but also greatly reduce trust costs. Currently, smart contracts have been widely applied in decentralized finance (DeFi), digital identity authentication, the Internet of Things, and other fields. With the continuous development of technology, the functions of smart contracts will become more powerful, and application scenarios will become more abundant.

Haines said other backers include Gabriel Shapiro, CEO and founder of MetaLeX, an advisory on crypto governance; Anil Lulla, CEO of Delphi Digital, a crypto research firm; and Solana-based automated market maker DeFiTuna.

Part of this growth is being driven by improvements in underlying blockchain infrastructure, with some networks now processing over 3,400 transactions per second, a more than 100-fold increase in throughput over the past five years.
