"In practical terms, this means HIVE is scaling production of Bitcoin much like a growth business scales output of a core product," he wrote. "Each incremental exahash increases daily production and revenue potential, while our HPC division provides a complementary revenue stream that grows with demand for compute power. "

Hash rate is the measurement of all the computing power on the leading cryptocurrency's network.

Last week's surge in the stablecoin market cap to \$300 billion and the release of \$1 billion in frozen funds from the defunct exchange FTX were key drivers,

Stephen Gregory, founder of crypto trading platform Vtrader, told Decrypt.

The "Alpha Arena," a competition that pits prominent large language models against each other in the live cryptocurrency market, saw OpenAI's GPT-5 and Google's Gemini 2.5 Pro with staggering losses of more than 28% during the same period.

"I believe some of the sell-off is due to a cohort of market participants stuck to the four-year cycle," Matthew Nay, a research analyst at Messari, told Decrypt. "If you look at the timing, it's almost exactly four years since we topped last cycle, and when you throw in trade war uncertainty, it allows them to defend their positions more aggressively."

The increases come, despite miners ongoing struggles with rising energy costs and lower rewards. After last year's halving, the payoff for miners has fallen to 3.125 bitcoin, down from 6.250 previously.
