Users on the Myriad prediction market, developed by Decrypt's parent company Dastan, accurately predicted that Bitcoin would hit \$125,000, placing odds above 90% on Friday. At the moment, users on Myriad also believe Bitcoin will outperform Ethereum, the second largest crypto asset by market cap, in the month of October.

That includes analyst Pat, who predicted a “generational bottom” for Bitcoin, citing its performance relative to gold over the past four years.

While Bitcoin was already struggling after the collapse of the ICO bubble, its sharp drop on Feb. 6 closely coincided with Kobayashi's major sell-off. Kobayashi denied that his Mt. Gox liquidations deepened the decline, but his actions drew criticism from market observers.

"If Bitcoin can loosen its correlation with US equities [amid] the tense geopolitical backdrop, particularly if gold flows decelerate, perhaps this is the trade after the trade," said venture investor Joe Consorti.

In a text to Decrypt, ETF.com Senior ETF Analyst Sumit Roy noted market concern about 3X funds and their potential limited audience.

Kobayashi's first major round of Bitcoin sales took place between September 2017 and March 2018, with blockchain data indicating that the largest offloading occurred on Feb. 6. By mid-March, Mt. Gox's Bitcoin holdings had fallen to around 166,000, after Kobayashi disclosed the sale of 35,841 BTC for 38 billion Japanese yen (about \$360 million at the time).
