Comprehensive Guide to binance bridge metamask

Uniswap added support for the Solana network to its web app, allowing Solana users to link their wallet and trade Solana-based tokens alongside those from other networks.

Why these three? Each has strong brand recognition, decent liquidity and different strengths: BTC as the store-of-value, ETH with its smart contract ecosystem and XRP with fast settlement and cross-border payments. Together, they cover what businesses need: trust, functionality and speed.

A bear trap occurs when the price breaks below a widely watched support level, draws traders into shorts, then reverses sharply higher, forcing covers and squeezing positions.

How to read: A decline in volume on the right shoulder signals weakening momentum. A price break below the neckline confirms a bearish reversal, while a break above it confirms a bullish inverse. Measure the distance from the head to the neckline, then project that distance from the breakout point to estimate the target move.

Looking ahead, Liu expects volatility to remain elevated as markets await clearer policy direction. “A more defined macro path or easing US political tension could restore confidence, reviving risk appetite and turning ETF flows back to positive,” he said.

Crypto companies must be registered with the FCA under money laundering regulations and comply with the UK’s financial promotions rules, which took effect in 2023, to advertise or provide services to residents.
