Historically, Bitcoin's price movements have followed a four-year cycle, often soaring one year after its halving—the quadrennial slashing of BTC miner rewards that's baked into Bitcoin's code—and then crashing soon after.

What really changes?

“When corporations gain too much legibility and influence over open source projects, priorities start to drift away from the community's long-term vision and toward corporate incentives. That's how misalignment begins.”

In between are the hybrids, those L1s that want to be open enough to attract the crypto-native crowd but structured enough to keep institutions comfortable. This middle ground is where some of the most interesting battles will be fought — because it's the one place both sides might meet.

Following the ICO crash of early 2018, Bitcoin and the cryptocurrency industry entered what's now known as the first crypto winter, as liquidity dried up and funding slowed down. Many crypto firms had to downsize or shut down.

This cycle has also been complicated by the introduction of trade tariffs, which have already trimmed growth in the first half of 2025 and are expected to continue dragging on GDP growth through the first half of 2026.
