Analysts at CryptoQuant said the data suggested an orderly market reset rather than a panic-driven collapse. Of the \$14 billion wiped from open interest, roughly 93% represented controlled deleveraging, and only \$1 billion in Bitcoin longs were liquidated.

The relative strength index or RSI also dropped to its lowest level, matching April's low value of 34, following which BTC started to recover in the charts.

He also thinks APIs face challenges such as a lack of standardization and regulatory fragmentation, which a guidance “outlining acceptable use cases” would solve by clearly showing “data privacy requirements and standards for interoperability — allowing firms to confidently adopt and integrate APIs into their programs.”

A high hash rate is important because it means more computing power is being used to keep the cryptocurrency's network secure. And the more computing power used, the harder it is for attackers to take control of more than 50% of the Bitcoin network.
