They warned that if the shutdown continues, its impact could extend from liquidity to structural trust in the US system. “The market’s next move may depend on whether the nation’s political institutions can restore consensus amid deep division,” they said.

These include conspicuously posted warnings about speculative risk, which direct the user to informational pages and other prompts designed to alert the user and mandated know-your-customer requirements.

Google's experiment is verifiable, meaning that the same results can be obtained by running the experiment on any quantum computer system with the same technical specifications as the one the researchers used.

Meanwhile, Jim Harper, a non-resident Senior Fellow with the public policy think tank the American Enterprise Institute, had a different approach.
