Decentralized applications (DApps) are changing the way we interact with the Internet. Unlike traditional applications, DApps run on blockchain networks, do not rely on centralized servers, and feature decentralization, openness, and immutability. Currently, DApps are mainly concentrated in games, finance, social media, and other fields, providing users with brand new experiences. Although the development of DApps still faces challenges such as user experience, performance, and scalability, with the continuous advancement of technology, we believe that DApps will become an important part of the future Internet.

Bitcoin, which has long been criticized for volatility as one of the key arguments against being a legitimate store of value, has also slipped 5.2% from its intra-day high of \$114,000, though daily losses were about 0.8% at the time of writing, according to Coinbase data.

The acquisitions came in three separate purchases: 202,037 ETH after the weekend crash, 104,336 ETH on Thursday, and 72,898 ETH on Saturday, according to onchain data from Arkham Intelligence and 'BMNR Bullz', which tracks the firm's purchases, though it has yet to be officially confirmed by BitMine.

Thus, other on-chain analysts have recently floated the idea that the \$14 billion worth of BTC that disappeared in 2020 was potentially never stolen at all; or, alternatively, that the heist was pulled off by the U.S. government, or hackers working for the government.

OpenAI's ChatGPT-5 slipped to last place, with an over 66% loss, taking its initial account value of \$10,000 to just \$3,453 at the time of writing.
