Blockchain security is the foundation and guarantee for the development of blockchain technology. Due to the complexity of blockchain systems, their security issues involve multiple aspects such as cryptography, consensus mechanisms, and network security. Common security threats include 51% attacks, smart contract vulnerabilities, private key leakage, etc. To ensure the security of

blockchain systems, measures need to be taken from multiple levels such as technology, management, and law. With the widespread application of blockchain technology, blockchain security will become increasingly important and will attract more professional talents to engage in it.

Lee, who oversees BitMine's Ethereum accumulation strategy, suggested Ethereum could rise in the same way the US dollar rose to dominance after 1971, after US President Richard Nixon made the US dollar "fully synthetic" and no longer backed by gold.

In a blog post published in August, Grewal wrote that "The Bank Secrecy Act Is Broken. Technology Can Fix It," saying the current compliance system is "rooted in decades-old requirements that reflect paper-based protocols designed for a financial system" where fund transfers take days.

Regulatory developments are also helping to drive adoption. In the United States, the recently passed GENIUS Act establishes clearer oversight and reserve requirements for issuers, aiming to ensure transparency and consumer protection. In the United Kingdom, where legislation has progressed more slowly, regulators are working toward introducing a stablecoin framework by the end of next year.
