But here's where things get interesting: BNB has been riding a powerful parabolic support line since mid-year. The chart shows a clear parabolic advance—the kind that can deliver explosive gains but also tends to end with equally explosive corrections. Looking at the projection, if this trajectory continues uninterrupted, BNB could be trading near \$2,000 by December 31, potentially delivering another 67% gain from current levels over the next 89 days.

While the previously explained part of the system is trustless, some parts remain non-trustless. Per the white paper, Babylon's Bitcoin vault liquidations utilize whitelisted liquidators to monitor the price and vault state, resulting in a liquidation system that is not permissioned and introduces trust assumptions.

VC participation remains necessary to bring the "progressive decentralization" needed to achieve a "secure global information infrastructure," explained Lubin.
