“No Kings” protests sweep the US

A bull trap happens when the price pokes above resistance and then reverses, while a bear trap occurs when the price dips below support and quickly snaps back. These fake breakouts often result from forced liquidations and mean reversion, clearing out crowded positions.

Bitcoin dropped below \$108,000 per coin in September as the biggest digital coin started "showing signs of exhaustion," according to Glassnode analysts, as long-term holders took profits and ETF flows slowed down.

Armbrust's covert crypto mining scheme used Digital River's resources "between 6 p.m. and 7 a.m. daily" and transferred the Ethereum to his own crypto wallet, according to Endicott.

The white paper provides a simple example: "Bob holds 1 BTC and wishes to borrow \$50,000 in a stablecoin from Larry via a lending protocol on Ethereum." This would necessitate that if Bitcoin's price falls under \$50,000, Larry can liquidate the collateral, and if Bob repays the loan on time, he recovers the BTC.

The results have surprised crypto traders, given that DeepSeek was developed at a fraction of the cost of its US rivals.
