The emergence of smart contracts has brought revolutionary breakthroughs to blockchain technology. These self-executing computer programs can automatically trigger corresponding operations when preset conditions are met, without manual

intervention. Smart contracts not only improve transaction efficiency but also greatly reduce trust costs. Currently, smart contracts have been widely applied in decentralized finance (DeFi), digital identity authentication, the Internet of Things, and other fields. With the continuous development of technology, the functions of smart contracts will become more powerful, and application scenarios will become more abundant.

Liquidity is typically thinnest during weekends and off-hours. Market makers widen spreads to manage risk, and a single headline can move prices beyond key levels before liquidity returns.

As Cointelegraph reported, bulls will have to drive the Ether price above the \$4,000-\$4,300 supply zone to signal the start of a new uptrend.
