way to send a dollar,” the report said.

BTC’s current price action closely resembles the March–April bottom range, when sharp intra-day wicks cleared out liquidity built over 30 days before a gradual recovery began. The pattern suggested that BTC could retest the \$100,000 range without necessarily breaking the broader bullish structure, unless it falls decisively below that level.

This cycle has also been complicated by the introduction of trade tariffs, which have already trimmed growth in the first half of 2025 and are expected to continue dragging on GDP growth through the first half of 2026.
