volume surging 185% to \$37.1 billion, driven by the Aster DEX generating over \$29 million in daily fees.

The comments follow Babylon's release of a white paper in early August, outlining what it calls a Bitcoin trustless vault system. The system leverages the Bitcoin smart contract verification system BitVM3 to lock BTC in per-user vaults, where withdrawals (redemption or liquidation) are gated by cryptographic proofs of external smart contract state verified on Bitcoin.

The stated objective for the models is to maximize their risk-adjusted returns. The rules emphasize autonomy, requiring each AI to independently generate its trading ideas, size and time its trades, and manage its own risk, with all model outputs and corresponding trades made public for transparency.

A contested framework
