Also, not every coin came from the market; geothermal mining reportedly added around 474 BTC over three years (small in energy terms, but still additive).

When shorter-term EMAs trade above longer-term ones like this, traders see it as a good sign. This configuration suggests money is positioned bullishly across multiple timeframes, from swing traders watching the 50-day to long-term holders focusing on the 200-day. Watch the candlesticks on weekly timeframes, and the gap between both averages is also bullish, and increasing over time.

The repayment deadline was extended by a year to give creditors more time to complete claim procedures. With about \$3.9 billion in Bitcoin still in Mt. Gox-linked wallets, this Halloween may again spark concerns about possible sell pressure.

Some analysts speculated that up to 99% of creditors might sell once they received their share. But when repayments actually began, there was “no significant spike” in trading volume, according to CryptoQuant founder Ki Young Ju.

Vitalik Buterin praises Polygon, Nailwal

Butterfill said that Bitcoin's "correction, and the subsequent liquidity cascades seen a week ago," are still reverberating through the industry, prompting some crypto-natives to further liquidate, adding that crypto market sentiment was generally bearish.
