DAT bubble bursting?

In early July, Mt. Gox wallets began moving Bitcoin as the exchange prepared for creditor repayments under the civil rehabilitation plan. Markets initially feared that recipients would immediately sell. Bitcoin dipped again after Kraken, one of the exchanges handling distributions, announced on July 24 that it had completed its process.

The Bitwise exec said the sell-off was mostly fueled by highly leveraged traders rather than fundamental shifts. He claimed nothing fundamental to crypto's outlook, including its underlying technology, security or the regulatory environment, had changed.

Kobayashi's Feb. 6 sale also coincided with Bitcoin's slide to around \$6,000, which was the lowest point of that year's first quarter. Bitcoin was already falling from its December 2017 peak of nearly \$20,000 during the height of the initial coin offering (ICO) boom.

From Times Square in New York to Portland and Los Angeles, crowds chanted "Resist Fascism" and "We the People Rule," according to a report from Politico.
