standards set by organizations such as the Uganda Civil Aviation Authority (UCAA) in Uganda, the Federal Aviation Administration (FAA) in Europe, Transport Canada, the Directorate General of Civil Aviation (DGCA) in India among others. For a person who
holds a mechanic certificate issued by the Federal Aviation Administration, the rules for certification, and for certification, and for certification is sometimes referred to by the FAA as the Aviation
Maintenance Technician and is commonly referred to as the Airframe and Powerplant (A&P). In the U.S, the general requirement for eligibility for a mechanic certificate include the following. The candidate must: Be 18 or older Be able to read, speak, and understand English fluently; Meet the experience or educational requirement; and Pass a set of
required tests within a maximum of 24 months.[4] The required tests include a set of knowledge tests, followed by a practical test, which includes an oral examination component, and which is administered by a Designated Mechanic Examiner (DME). A person who fulfills the necessary requirements is issued a mechanic certificate with either an
airframe or powerplant rating, or both.[5] These ratings together account for the common practice of referring to mechanics as "A&Ps." Until 1952, instead of the Powerplant rating, an Engine rating was issued, so the abbreviation "A&E" may appear in older documents.[5] Eligibility for the mechanic tests depends on the applicant's ability to
document their knowledge of required subject matter and ability to perform maintenance tasks.[6][7] The FAA recognizes two ways of demonstrating the needed knowledge and skills: practical experience or completion of a training program at a school certificated under Part 147 of the FARs.[8] The AMT Society presents the annual maintenance
skills competition, which recognizes top AMT teams across all aviation including commercial and military. Applicants for a mechanic certificate with a single rating—either airframe or powerplant—and who base their application on practical experience must demonstrate 18 months of work experience applicable to the chosen rating. Those applying
for both ratings must show a total of 30 months of applicable experience. [8] The United States military provides an opportunity to gain practical experience to earn an Airframe and Powerplant License as long as the members careers meet the required career specialty
codes or MOS.[9] Applicants who attend an aviation maintenance school program certificated under Part 147 study an FAA-approved and supervised curriculum. Those applying for a mechanic certificate with a single rating—either airframe or powerplant—study a "general" set of subjects for at least 400 hours, as well as at least 750 hours of material
appropriate to the chosen rating, for a total of 1,150 hours. Those who pursue both ratings study the "general" material, as well as the 750 hours for each rating, for a total of at least 1,900 hours. [10] Completion of such a program of study typically requires between 18 and 24 months. Required areas of study in the "general" curriculum include
electricity, technical drawings, weight and balance, hydraulics and pneumatics, ground operation of aircraft, cleaning and corrosion control, basic mathematical calculations, forms and record-keeping, basic physics, maintenance manuals and publications, and applicable federal regulations. [11] Thorough knowledge of FAA rules and regulations
(especially with regard to accepted repair/modification procedures) is also expected of A&P mechanics. Required areas of study in the airframe curriculum include inspection, structures—wood, sheet metal, composite—and fasteners, covering, finishes, welding, assembly and rigging, hydraulics, pneumatics, cabin atmosphere control systems,
instrument systems, communication and navigation systems, fuel systems, position and warning systems, ice and rain control systems, ice and rain control systems, and fire protection systems, fire protection systems, ice and rain control systems, and fire protection systems.

authorization (IA), which is an additional rating added on to the individual's mechanic certificate. These individuals are allowed to perform annual inspections on the required block of the FAA form 337. Certification and limitations, including renewal requirements, of
every two years (on odd years) by submitting to the FAA a form showing a minimum of 8 hours of FAA approved training. This activity must be accomplished every 12 months even though the
renewal period is every 24 months. Training There are 180 maintenance schools in the United States.[14] In 2017 number of students was 18,000.[15] The scholarship for students was 292,002, only 2.4% were women.[17][18] According to the 2019
report from Boeing North America will need 192,000 new technicians over the next 20 years.[19] Wage level The average annual income of aircraft maintenance personnel is $68,677 in the United States.[20] Aircraft maintenance engineer (Canada) Charles Taylor Master Mechanic Award ^ "Site Maintenance". ssp.delta.com. Geographic Location: Salaries can vary significantly based on where you work, with some regions offering higher pay than
others. Type of Aircraft: Mechanics working on larger or more complex aircraft may earn more due to the added responsibility. On average, aircraft mechanics and aviation technicians in the United States earn annual salaries ranging from $60,000 to $80,000. However, it's important to note that these figures can vary widely based on the factors
mentioned above. High-Paying Locations The location of your employment plays a substantial role in determining your earnings. Some regions with higher living costs and a strong demand for aviation professionals tend to offer higher salaries. Examples include: Alaska, aircraft mechanic salaries are notably high due to the unique
challenges posed by the state's extreme weather conditions and remote locations. The demand for skilled aviation professionals is crucial for maintaining aircraft in top condition, ensuring safety in challenging environments. Additionally, the limited accessibility and harsh climate contribute to a scarcity of qualified personnel, driving up the
compensation for aircraft mechanics in this region. Hawaii: In the tropical paradise of Hawaii, aircraft mechanics enjoy top-notch compensation, thanks to the demand for their expertise in maintaining the archipelago's vital air connections. The breathtaking scenery and island-hopping culture make aviation a lifeline, requiring skilled professionals
who command higher salaries. Factor in the idyllic lifestyle and the high cost of living, and it's clear why Hawaii stands out as a high-paying location for aircraft mechanics due to its thriving aerospace industry. With major aerospace
companies and defense contractors based in the state, there is a consistent demand for skilled aircraft maintenance professionals. The precision and expertise required in ensuring aircraft safety contribute to the competitive salaries offered. Additionally, the relatively high cost of living in Connecticut further supports the trend of elevated
compensation for aircraft mechanics in the region. Career Advancement and Growth As aircraft mechanics gain experience and acquire additional certifications, their earning potential can significantly increase. Many mechanics gain experience and acquire additional certifications, their earning potential can significantly increase. Many mechanics gain experience and acquire additional certifications, their earning potential can significantly increase.
Aircraft mechanics and aviation technicians are vital to the safety and efficiency of the aviation industry. While average salary figures provide a general idea, individual earnings can vary widely based on experience, location, and specialization. considering a new career. Statistics for aviation maintenance technician (AMT) or aircraft mechanic salaries are publicly available from a variety of sources. We'll look at a few of them in this article but one of the benefits of a union is all of the pay figures are publicly available. This makes it much easier to get an accurate picture of how much aircraft
mechanics make. According to the US Bureau of Labor Statistics (BLS), the median annual wage for aircraft mechanics is $72,640. The averages spread from $41,000 on the low side to over $108,000 on the high side. Remember, these are average numbers across the entire nation. That means that salaries could be lower or higher than this range
and the median salary for someone in a high-paying region could be significantly higher. This report, dated May 2021, indicates the highest wages for aircraft techs are found in Maryland, New Jersey, and Connecticut, where average wages are between $81,110 and $84,240. Texas employs the most aircraft service technicians, with 14,940 workers
Almost half of those jobs are in the Dallas-Fort Worth area. Other top states for high employment include Florida, California, Tennessee, and Georgia. The Miami, Los Angeles, Memphis, New York, and Seattle metro areas have the most techs surveyed. The highest aircraft mechanic salaries are at the major airlines (Delta, United, American) and the
major cargo operations (FedEx, UPS, etc.). As an aircraft mechanic at one of these operations with your family. you get an idea of just how much you could earn as an airplane mechanic we've put together this calculator that allows you to see your potential aircraft mechanic salary. This calculator was built using the average hourly pay rates published but several major airlines. This calculator only gives you an estimate and is likely a low estimate because it
doesn't factor in overtime pay, bonuses, or new union contracts that will likely increase pay even more. The BLS tracks 18,910 avionics technicians separately. The overall median wage for that field is slightly higher, at $69,280. Florida, California, and Texas employ most of them, with the highest wages found in Connecticut. While perhaps more
accurate than other sources, these statistics are still gathered from a limited sample of aircraft mechanic salaries and may not include all factors. For one thing, international options are not include all factors. For one thing, international options are not included at all. Regardless, nearly all sources base their information on these numbers since they are much more reliable than other sources. As with any career, you can get the best idea of how much money AMTs make by looking at the job
listings in your area. What are the real jobs you could apply for once you have the credentials, and what are those positions offering? Indeed provides average base salary data for several relevant occupations. As an aside, the site also lists over 6,400 job openings for the career. Aircraft Maintenance Technician, $60,854 per year or $29.93 per hour
Aircraft Mechanic, $75,648 per year or $30.59 per hour Aviation Structural Mechanic, $57,642 per year or $24.70 Avionics Engineer, $101,132 per year or $43.43 per hour The issue with the numbers from Indeed, and many other websites like it, is that there is little curation of the data they collect. As a result, AMT and avionics engineer jobs are
dispersed unevenly across various wordings of job titles. For example, the site has listings and salary information for avionics engineers, avionics engineers, avionics maintenance technicians, avionics system engineers. However, one handy thing that Indeed gives you is the top companies that employ each specialty. For example, top employers
for AMTs include Northrop Grumman, Wheels Up, and Alaska Airlines. The most avionics tech jobs on the site come from General Dynamics, Boeing, and Lockheed Martin. Glassdoor also publishes aircraft mechanic salary $57,371, with the most likely range falling between
$47,000 and $71,000. Top paying companies, as listed by the site, include Boeing ($88,101 per year), GE ($87,990 per year), and United Airlines ($80,296 per year). While the exact number varies from site to site, the job outlook for aviation maintenance
technicians can expect first-year job offers between the low $40s and the high $50s. What's even better? There are plenty of jobs, and employers are competing to get distracted by the minutiae of each different title, location, and
employer. So instead, focus on the important things-is this a career that you'll enjoy, and is it one in which I can get a job in an area where I want to live? This fall, Boeing machinists went on strike for 7 weeks. The company finally reached an agreement with the union leading 38% pay increases over four years. This will significantly increase pay for
these aircraft mechanics. Over the course of the next few years, major airlines will likely enter negotiations with their aircraft mechanic unions and they will all likely pursue at least the same pay increases these Boeing machinists received. This is fantastic news for future aircraft mechanics like yourself. As you enter this exciting career field you'll
likely be receiving even higher pay than current A&P technicians.
