Such outages highlight calls by Elizabeth Warren and others to split up Big Tech companies to maintain competition. Article continues below advertisementAntitrust chief of the EU Margrethe Vestager has said the outage showed the dangers of relying on just a few big players and that competition in the space is urgently needed. In 2021, she proposed the Digital Markets Act (DMA) to force major tech companies to change their business models to allow more competition. We need alternatives and choices in the tech market, and must not rely on a few big players, whoever they are, that's the aim of (the) DMA, tweeted Vestager. In 2019, Telegram was banned in Russia when Durov refused user data access to the Kremlin. As a result, protestors came out in support of Durov's decision. Eventually, the app was reinstated two years later and is currently being utilized in the war in Ukraine because of its security features. Durov made a Telegram post in March 2022 explaining his desire to keep Ukrainian users' data safe, saying, "When I defied [the Kremlin's] demands, the stakes were high for me personally. I stand for our users no matter what. With its focus on secure communication and defiance of authority, Telegram is far from your typical Silicon Valley start-up. Let's unpack Telegram's ownership and strategic direction with an overview of its core philosophies. Image source: Getty Images. Pavel Durov and his brother Nikolai founded Telegram in 2013. Pavel is the visionary entrepreneur, focusing on the strategic and business aspects of the platform. Nikolai manages the technical side, leveraging his deep expertise in cryptography and software development to enhance the messaging system's security and efficiency. After being ousted from the Facebook-like VK service, the brothers founded a company briefly called Digital Fortress to manage the Telegram messaging app. VK
experienced several skirmishes with Russian authorities when Pavel Durov consistently refused to share customer data or shut down accounts critical of the government. The new service started life in London with a focus on strong encryption and privacy features. VK lives on as a popular social media platform in Russia, combined with the Mail.ru online services empire. Telegram's infrastructure runs on a global network of data centers, while the company's operating center has moved between places like London, Berlin, and Singapore mainly to navigate and adapt to international data privacy laws and maintain operational flexibility. In the spring of 2024, Telegram's headquarters were in Dubai, United Arab Emirates, but Pavel Durov has said the office could move again if local data-sharing regulations change. The client software is open-source, allowing anyone to review the app's encryption, security policies, and other code-based questions. The server-side code is not public. Telegram argues that sharing that code wouldn't boost security because observers can't verify that the public code is exactly what runs on the operating servers. Moreover, sharing that code could help "authoritarian regimes" launch competing messenger apps with the same features but redesigned to support their oppressive policies. That's not the legacy Telegram wants to create. "We are not ready to betray our values because a few confused users seem to think publishing server-side code will somehow improve verifiability," Pavel Durov said in a public Telegram post in January 2021. This is a common practice in the software industry, where end-user programs often come with published source code, while server-side code remains proprietary to protect operational integrity and prevent misuse. Telegram has never published any details about its ownership structure. That may change in the future as the company prepares to go public offering (IPO) may seem incompatible with Telegram's fiercely independent ambitions, but Pavel Durov sees community value in a financially stable version of the messaging system."The main reason why we started to monetize is because we wanted to remain independent," he said while discussing the IPO idea with The Financial Times in March 2024. "Generally speaking, we see value in it as a means to democratize access to Telegram's value."Until then, Pavel appears to be the principal owner of the Telegram business. Nikolai may hold a smaller ownership stake, but most observers see him as a technology-focused employee more than a visionary partner. He is an important figure in Telegram's history. Still, Pavel manages the business end and serves as the company's public face. The company for the term of term. The term of term. The term of term. The term of ter has raised money from several investors over the years, including the Abu Dhabi Catalyst Partners fund and its parent organization, the Mubadala Investment Company.Long story short, Pavel Durov is broadly seen as the owner and operator of Telegram. Other shareholders may exist, but their stakes can't hold a candle to Pavel's controlling interest If Telegram proceeds with an IPO, more information should become available to clarify the ownership structure. Board of directors who is on the board of directors steering the long-term strategy and an executive team running the day-to-day business. Instead, Pavel Durov calls the shots, and Nikolai Durov manages the technical development efforts, and they are supported by a growing group of employees. The closest thing to an official board is former Morgan Stanley (MS -0.18%) executive John Hyman, who serves as Telegram's chief investment adviser. Even if you count Nikolai Durov and John Hyman as unofficial board members, the company is still firmly under Pavel Durov's control. A future IPO would likely involve selling less than half of Telegram's stock on the open market, similar to the minority-interest stock sales offered by Mark Zuckerberg's Facebook (META 0.49%) or Larry Page and Sergey Brin's Alphabet (GOOG 0.06%)(GOOGL -0.01%). Facebook (now Meta Platforms) is under Zuckerberg's eternal control, while Page and Brin will always have the last word in Google's (now Alphabet) boardroom votes. How to invest in Telegram Telegram is a private company. By all reports, Pavel Durov owns essentially the whole company. That may change, though. Durov has talked about raising cash in an IPO, making Telegram a publicly traded stock. As of the spring of 2024, that's an idea for the future, and no official paperwork has yet been filed in pursuit of an IPO.So, Telegram isn't an investment option yet, but you can invest in other technology companies in the social media and online communications arena. For example: Meta remains a giant in the field, with social media platforms Facebook, Instagram, and WhatsApp under its belt. Snap (SNAP -0.42%) runs the privacy-oriented Snapchat messaging services, including platforms similar to Snapchat and Twitter, with a Chinese focus.Twilio (NASDAQ:TWLO) doesn't run social media systems but provides communication features and development assistance to many companies in that space.Mind you, Telegram was not designed to turn a profit. Pavel Durov initially funded its operations out of his own savings, and advertising is still restricted to broadcast channels. One-on-one discussions and group chats are ad-free and should remain so for the foreseeable future."All parts of Telegram devoted to messaging will remain ad-free," Pavel Durov said in a public Telegram post in December 2020. "We think that displaying ads in private 1-to-1 chats or group chats is a bad idea. Communication between people should be free of advertising of any sort."Related investing topics And since investors largely expect to share the underlying business operation's long-term cash profits, a profit-dodging organization like a strong choice. Then again, not chasing optimal profits isn't always a deal-breaker. - as was the case when IBM (IBM 0.07%) acquired Red Hat -- and computer-driven insurance company Lemonade (LMND 4.21%) donates excess profits to charities. Telegram may end up with a similar story. No country owns Telegram. In fact, the Durov brothers keep moving its headquarters from one country to another as the information-sharing regulations change in each market. Currently based in Dubai, Telegram could very well move its operating base to another city in a different nation at any time. The Durovs were born in St. Petersburg, Russia. However, they have shunned any ties to that country. Pavel currently holds citizenship in France, the United Arab Emirates, and the Caribbean nation of St. Kitts & Nevis. Telegram's basic chats are encrypted in transit, using a custom encryption protocol based on the SHA-256 industry standard. It is designed to transfer large files securely over unreliable mobile connections. It also offers "secret chats," which don't rely on any public security keys and can be set to auto-delete. When used with two-factor identification and tight privacy settings (such as keeping your phone number secret), security experts see Telegram as a stable and are quite difficult to read unless you're part of the conversation. So, Telegram is a solid messaging choice from a privacy and security perspective, but competing services can put up a real fight. Some researchers prefer WhatsApp's default end-to-end encryption, and the Signal app's strict privacy focus and minimal data collection puts it a step ahead of Telegram in many ways. However, the alternative solutions can't compete with Telegram's ability to broadcast messages to enormous recipient groups, and many users prefer its almost ad-free experience. Pavel Durov founded Telegram in 2013 and effectively still owns the entire company. Other investors and partners may hold small shares of the business, but the company has not divulged its ownership details and probably won't unless/until it launches an IPO. At that point, regulators would require specific ownership info, and public shareholders would become a part of the equation. No. Pavel Durov effectively owns the company, although a couple of investors may have established a small ownership info, and public shareholders would become a part of the equation. No. Pavel Durov effectively owns the company, although a couple of investors may have established a small ownership info, and public shareholders would become a part of the equation. take part in this messaging system's potential value gains. Telegram may be among the most popular messaging services in the world, yet many still dont know what its all about. The app is often name-dropped in discussions regarding online privacy and security, but arent most, if not all, messaging apps secure? Dont more popular apps like WhatsApp and Facebook Messenger (despite their ties to Meta) also have the fabled end-to-end encryption? What makes Telegram is a multiplatform messaging service founded by Russian-born entrepreneur Pavel Durov, although it was temporarily banned in Russia and has no affiliation with any government or company. It first rolled out on iOS and Android in late 2013, and now has an estimated 900 million monthly users. Telegrams user base tends to increase whenever a privacy scandal hits one of its larger competitors. What makes Telegram unique is its focus on privacy, encryption, and an open-source API. In addition to the official clients. Telegram apps and web interface, there are countless unofficial clients. device. How does Telegram work? Telegrams core functionality is the same as most other messaging apps: You can message other Telegram users, create group conversations, call contacts, make video calls, send files and stickers, and so on. However, there are a few specific features that make it work differently from other chat apps. First and foremost, Telegrams headline feature is privacy, and to ensure this, it employs end-to-end encryption. This
is what stops those outside a two-way conversation be it a company, the government, hackers, or anyone else from seeing what has been sent. However, Telegram only uses this encryption in calls and its secret chats feature, not in regular chats Those are only encrypted client-to-server. Meanwhile, WhatsApp, the supposedly less secure service, has used end-to-end encryption in all messages, calls, and video calls since 2016. Telegram is all about privacy and security, and it isn't beholden to larger companies like Facebook. This is due to Telegrams enhanced use of the cloud. Essentially, it stores all of your messages and photos on a secure server. This means you can access them from any connected device, making Telegram much more multi-platform friendly than other chat apps like WhatsApp. Another security feature that adds usability is usernames. Instead of giving people your phone number, you can simply give them your username. This gives you better control over what information is out there, and how people can contact you in the future. If you want even more privacy, you can generate a temporary QR code so people can add you without a username or phone number. Telegram also offers Stories, which have been a popular feature on other social media and chat apps. All members can view, post, or interact with Stories, but Telegram offers extra features to Premium subscribers. This is better than before, though. At launch, only paid members could post Stories. Is Telegram safe to use? Christian Wiediger on UnsplashTelegram is generally as safe as or safer than most other chat apps. WhatsApps end-to-end encryption on all messaging could be argued to be a better approach, but the companys ties to Facebook/Meta may turn off privacy advocates.Plus, if youre using the secret chats, and messages can be programmed to self-destruct. Deleting a message also deletes it for everyone on the service, and users have the option to delete not just their own messages, but other users messages, but other users messages, but you will still need to protect your remember is that selling your data isnt at the core of Telegrams business model. According to Telegrams FAQ page, the company was mostly funded by its founder and CEO, Pavel Durov, not through advertising or data collection and sharing. However, this changed in 2021. Telegram started introducing conscious advertisements that can appear in certain public channels. On the same page, Telegram also lists one of its two tenets, advertisers, etc. That puts it in stark contrast to a myriad of services from Facebook, Google, Amazon, and others. Ultimately though, using Telegram doesnt necessarily mean your messages are more private or secure than when using WhatsApp or other messaging apps. Server-side data leaks can still happen, and no amount of encryption will help if your end device is already compromised. Is Telegram free? Telegram is free to use and supported by its founder and CEO Pavel Durov. The company began employing new monetization methods in 2021, including a Telegram Premium subscription service, but the core business of chatting will remain free for everyone. These new monetization methods include ads on public one-to-many channels (which function like Twitter feeds), premium features for business teams and power users, and paid sticker packs. Some of these funds will go back to users in the form of enhanced visibility for channels or payments to creators of unique sticker packs. Telegram Premium costs roughly \$5 a month and includes a few extra features like larger file uploads, premium stickers, and more. It also removes ads. Since Telegram stores chats and files on a remote server instead of your device, you can also access everything (except secret chats) from the web, Access it via the web portal or any of several Chrome extensions. The company also makes its API publicly available for free and invites developers to create clients on other platforms. Users can also create custom bots, themes stickers, and more free of charge. Pros of switching Telegrams main feature list may cross over with other apps, but there are many specific differences between it and its competitors. Here is a short list of some of the major features that may push you to switch messaging apps. The aforementioned secret chats are where you can take part in end-toend encrypted messaging with a contact. But thats not its only benefit: Secret chats also dont allow a person to forward messages from there or take screen with another device, but its still discouraged, and its bolstered by another feature: self-destruct timers. If you dont want messages in your secret chats to hang around forever, Telegram lets you set self-destruct timers to permanently remove them. After a message is received, it remains in the chat for a predetermined period you can choose times between one second and one week before disappearing. Telegram no longer requires a SIM card to sign up. You will, however, need to buy an anonymous phone number from the Fragment service. These are purchased using Telegrams Toncoin cryptocurrency. These numbers are tied to the blockchain and only work with Telegram. Since non-secret chats and files are stored in the cloud, you can access them from any device by logging into your account. You will never have to worry about on-device storage or losing important files, but the trade-off is that you lose a bit of privacy and security. Since an update in 2019, Telegram has allowed users to delete messages sent by other users, across all devices. Its a somewhat divisive feature. Having your messages deleted by someone else doesn't feel very good. But if your conversation is between you and a person you trust, its another handy way to control your online communications. As mentioned above, the use of usernames instead of phone numbers means your account isnt tied to just one phone. This makes it so you dont have to share your phone number with someone to add them as a contact in Telegram. Telegram comes with some customization options absent from many of its competitors where you can maken you can maken you can make you can make you can make you can be dominant app color. use of bots to improve the experience. You can even create your own themes, bots, and full apps using the Telegram API. Over the years, Telegram has built up an extensive bot ecosystem that adds even more functionality to the app. A further privacy blunder is that Telegram notifies your contacts when you join it unless you dont give it permission to access your contacts. The app doesnt warn you its about to ping your contacts, and thats a big caveat for those who want to use Telegram has over more popular messages is simply that: popularity. Despite its hundreds of millions of fans, Telegram is still leagues behind WhatsApp, Facebook Messenger, and WeChat in active monthly users. If youre in the West and you meet a new contact, the odds are theyll prefer using WhatsApp is an uphill battle for Telegram, even in 2025. Should I use Telegram? Scott Adam Gordon / Android AuthorityPrivacy itself isnt a particularly attractive product feature in online services. It can be nebulous: We cant always feel or understand it, and sometimes, its only when privacy is taken away that we take it seriously. If youre a particularly private person and troubled by news reports regarding online security and privacy breaches, you should absolutely consider using Telegram with Secret Chats enabled. You will have largely the same experience as with more popular messaging apps, with greater peace of mind. Thats far from saying Telegram will protect you from all privacy terrors the online world presents. concerns over other messaging apps. You can download the app for free from the Google Play Store via the button below give it a try with a pal if yourself. Held annually, The Boat Race is a side-by-side rowing race between crews from the universities of Oxford and Cambridge along a 4.2-mile (6.8km) tidal stretch of the River Thames in south-west London, England. For the third time in the history of the event, the men's, the women's and both reserves' races were all held on the Tideway on the same day. The women's race saw Cambridge lead from the start, eventually winning by a considerable margin to take the overall record to 4330 in their favour. In the women's reserve race, Cambridge's Blondie (crew pictured) defeated Oxford's Isis by a margin of four lengths. The men's reserve race was won by Cambridge's Goldie, who defeated Oxford's Isis by a margin of four lengths. a whitewash as Cambridge won, taking the overall record to 8380 in their favour. The races were watched by around 250,000 spectators live, and broadcast around the world. At the time, it was known as the Year of the Consulship of Valentinianus and Anthemius (or, less frequently, year 1208 Ab urbe condita). The denomination 455 for this year has been used since the early medieval period, when the Anno Domini calendar era became the prevalent method in Europe for naming with the bow on the Campus Martius (Rome), ending the Theodosian dynasty. His primicerius sacri cubiculi, Heraclius, is also murdered.March 17 Petronius Maximus, former domesticus ("elite bodyguard") of Aetius, becomes (with support of the Roman Senate) emperor of the Western Roman Empire. He secures the throne by bribing officials of the imperial palace Maximus consolidates his power by a forced marriage with Licinia Eudoxia, widow of Valentinian III. Maximus appoints Avitus, most trusted general, to the rank of magister militum and sends him marry Eudocia, eldest daughter of Valentinian III.May 31 Maximus is stoned to death by an angry mob while fleeing Rome. September 21 Avitus enters Rome with a Gallic army. He restores the imperial authority in Noricum (modern Austria) and leaves a Gothic force under Remistus, Visigoth general (magister militum), at Ravenna. The Ostrogoths conquer Pannonia and Dalmatia. Battle of Aylesford: Prince Vortimer rebels against the pro-Anglo-Saxon policies of his father, Vortigern. He is defeated in the battle at Aylesford (Kent). Hengist and his son Oisc become king of Kent. Horsa and Catigern, brother of Vortimer, are killed. The Britons withdraw to London (according to the Anglo-Saxon Chronicle). Skandagupta succeeds Kumaragupta I as ruler of the Gupta Empire (India). During his reign he crushes the Hun invasion; however, the expense of the wars drains the empire's resources and contributes to its decline. Gaero becomes king of the Korean kingdom of Baekje. 400Millennia1stmillenniumCenturySthcen Hemisphere at the beginning of the 4th century CE.Eastern Hemisphere at the end of the 4th century was the time period from 301 CE (CD) in accordance with the Julian calendar. In the West, the early part of the century was shaped by Constantine the Great, who became the first Roman emperor to adopt Christianity. Gaining sole reign of the empire, he is also noted for re-establishing a single imperial capital, which had effectively been changed by Diocletian's reforms to Milan in the West, and Nicomedeia in the East) to build the city soon called Nova Roma (New Rome); it was later renamed Constantinople in his honor. The last emperor to control both the eastern and western halves of the empire was Theodosius I. As the century progressed after his death, it became increasingly apparent that the empire was Theodosius I. As the century progressed after his death, it became increasingly apparent that the empire had changed in many ways since the time of Augustus. The two-emperor system originally established by Diocletian in the previous century fell into regular practice, and the east continued to grow in importance as a centre of trade and imperial power, while Rome itself diminished greatly in the century Christianity became the official state religion, and the empire's old pagan culture began to disappear.[citation needed] General prosperity was felt throughout this period, but recurring invasions marked the beginning of the end for the Western Roman Empire. In China, the Jin dynasty, and the empire from 376[1][2] CE onward. These early invasions marked the beginning of the end for the Western Roman Empire. In China, the Jin dynasty, and the empire from 376[1][2] CE onward. which had united the nation prior in 280, began rapidly facing trouble by the start of the century due to political infighting, which led to the insurrections of the northern barbarian tribes (starting the Sixteen Kingdoms period), which quickly overwhelmed the empire, forcing the Jin court to retreat and entrench itself in the south past the Yangtze river, starting what is known as the Eastern Jin dynasty around 317. Towards the end of the century, Emperor of the Former Qin, Fu Jin, united the north under his banner, and planned to conquer the Jin dynasty in the south, so as to finally reunite the land, but was decisively defeated at the Battle of Fei River in 383, causing massive unrest and civil war in his empire, thereby leading to the fall of the Former Qin, and the continued existence of the Eastern Jin dynasty. Most messages feature client-to-server encryption, but Secret Chat messages have end-to-end encryption. Telegram is a popular cross-platform messaging app that is widely used because it offers some enhanced privacy and encryption features as well as support for large group chat features. It also has no ties to other social media platforms (both Facebook, for example), which makes the service more appealing to some. The app is multiplatform, with versions of the app available for iOS, Android, Windows, Mac, and Linux. You can also access the Telegram from a web browser. You can access the Telegram app on a variety of devices, like Android tablets. Chesnot / Contributor/Getty Images Telegram was founded by Russian social media entrepreneur Pavel Durov, and the service is free to use. Telegram's signature feature is its end-to-end encryption, but it's important to be aware that not all communication within Telegram has this level of privacy. Most messages use client-to-server encryption, which is less secure than end-to-end encryption, you need to use Telegram's Secret Chat feature. These secret chats offer substantially more robust security, but are only accessible from the device you originated the message on. Telegram's privacy and security is considered trustworthy in part because the service's API is open-source and available for evaluation and integration by any developer. If you already use another app for one-on-one and group chats, you might not find Telegram compelling enough to use it. But if you are looking for a highly secure messaging app that has rock-solid security and privacy, Telegram can fit the bill. Here are some pros and cons to using Telegram: Pros End-to-end encryption: When using the Secret Chat mode, communication is completely encrypted from end to end, rendering communication essentially bulletproof. You can also get end-to-end encryption in apps like WhatsApp and Signal. Self-destruct after a set period of time, making it even more secure. This is similar to what you can do in apps like Snapchat, Instagram, and Facebook Messenger. You can set messages to auto-delete after a certain amount of time. Anadolu Agency / Contributor/Getty Images Large file sizes: Telegram supports file attachments up to 2 GB in size. This is one area where Telegram has virtually all other messaging apps beat. Only Skype comes even remotely close, limiting you to 300 MB files. Most apps are much more limiting WhatsApp is just 16 MB, for example. Cons Limited user base: While Telegram has several hundred million active monthly users, it's still significantly smaller than the 1 billion-plus active user bases on WhatsApp or Facebook Messenger. That means there's a good chance your friends and contacts are not using the app. New user announcements may violate privacy: One of the main reasons many people join Telegram is to be able to send secure and private messages. That's why it's frustrating that your contacts already on the app get notified when you join. It's a gathering place for conspiracy theorists and hate groups: As mainstream social media services increasingly take down QAnon groups, neo-Nazis, and other hate groups and conspiracy theorists, Telegram has become an attractive gathering place for many of these groups because of the enhanced security and permissive content policies, though Telegram has ramped up efforts to disable accounts run by hate groups and extremists.
