I'm a 23 y/o girl from Bahrain so we normally have black hair. I've been doing laser for my face "fine hair" every month or 2 for 6 years now. I tired several machines/brands till currently (Vectus Palomar) which I believe is good so I decided to do my arms+legs+bikini & results are pretty good. so I'm thinking to do my back+tummy but I'm afraid I will experience the same thing as my face (becomes more hair instead of less). so, which machine/brand mentioned in the Q is the best for fine hair? Check out Ari's cynosure elite laser reviews and the reason why this light-based cosmetic systems are extremely versatile and treat a wide variety of issues. DESCRIPTIONCynosure's light-based cosmetic systems are extremely versatile and treat a wide variety of issues. The company holds 37 patents for their solid-state, liquid and semiconductor laser technologies. While based in the United States, Cynosure has clients in more than 60 countries across the globe.Cynosure lasers work for the following applications:Hair removal Skin tighteningSkin rejuvenationScar reductionVascular treatments ARI'S THOUGHTSI consistently recommend Cynosure to my clients. Not only does Cynosure make a great machine, but also this is one of the most popular brands on the market. Cynosure offers lasers that treat very diverse issues and they have a great reputation, having been made for over 12 years.One thing I love about the Cynosure is that it doesn't require much in the way of consumables. It is possible to find parts on the second hand market and the machine is very easy to service.Further, Cynosures are so reliable that they require less servicing. Unlike some other systems like Alma and Cutera, all the servicing can be conveniently handled in the second hand market, which saves customers time and money.Another great aspect of the Cynosure is that it tends to be less painful for patients and treatment is quite fast. There is a separate chiller that attaches to the hand piece and blows cool air before and after the hair is removed.When it comes to the Cynosure, I like to point out that it is perfectly ok to own or rent an older model. What you get today is essentially the same machine that has been made since 2004. The only difference is that the name and design have changed. What kinds of professionals are happiest with the Cynosure?Clinics that need to offer treatments to both dark and light skin types will be quite happy they selected the Cynosure. Since it has a dual head offering Alexandrite and YAG, it works well for a range of skin types. What Do You Need To Know Before You Purchase a Cynosure Machine?You'll know that you are getting a good deal on this laser if you find one that has a low shot count and good voltage. Check the voltage to ensure it has reasonable voltage for maximum energy.While the Cynosure requires far fewer repairs, the ones that we see the most include calibration issues, broken fibers and occasionally water flow errors. You'll also have to expect that you will need to change the lamp at some point.We estimate that you should budget between 4k-6k per year for maintenance on a Cynosure. You will need to budget for windows, but the good news is that they are very inexpensive.There are no other consumables and this factor greatly increases the profits our clients can generate when they select a Cynosure. 1. Apogee EliteThe Apogee Elite works on collagen stimulation including skin rejuvenation, wrinkle reduction, skin tightening, laser facials, leg veins, acne, facial veins, and lesions. This customizable laser system can remove hair on all skin types and offers dual-wavelength. As a result, it has both an Alexandrite and Yag laser, enabling practitioners to treat patients with a variety of skin types.The Apogee Elite includes SmartCool technology; this flow of chilled air maximizes client comfort during and after the treatment. SmartCool also is protective against potential thermal damage to skin.The Cynosure Apogee system offers a powerful 755 nm Alexandrite laser to effectively remove hair and also treat leg and facial veins.The Cynosure Apogee cosmetic laser system is part of the Cynosure Elite line and this model is especially effective for laser hair removal from all skin types, as well as spider vein treatments and other lesions, birthmarks, age spots and sun spots. Studies have shown that the Apogee system can achieve up a 75% or more reduction in hair in as little as just three treatments, whereas other systems sometimes require double the number of treatments to get to that level. And as your needs change, you can also upgrade this system to include a 1064 Nd:YAG laser so that you can offer even more cosmetic procedures.CYNOSURE APOGEE LASER APPLICATIONS:Leg VeinFacial VeinLaser Hair RemovalCYNOSURE APOGEE LASER FEATURES:Laser type: AlexandriteMaximum repetition rate: 3 HzCooling system: Cold air or integrated coolingSpot size options: 5 mm up to 15 mmAiming beam: Blue/GreenWavelength: 755 nmDimensions: 41" x 15" x 25"Weight: 180 lbs.Electrical requirements: 110 VAC/20A or 200/220 VAC/30A 2. Elite MPXThe Cynosure Elite MPX is a dual wavelength cosmetic machine, which enables it to treat patients with a wide variety of skin types. The wavelengths offered by this system are Alexandrite and Yag, and the fact that they can be sequentially emitted allows for efficient and accurate results. This is an extremely diverse laser, as just one machine offers a range of functionality.In addition to hair removal, it handles leg veins, facial veins, pigmented lesions, rosacea and sun-damaged skin.The Cynosure Elite MPX includes SmartCool technology; this flow of chilled air maximizes client comfort during and after the treatment. SmartCool also is protective against potential thermal damage to skin.The Cynosure Elite MPX is a dual wavelength aesthetic laser workstation that offers the versatility to perform a long list of hair removal procedures and other aesthetic treatments.There are plenty of good options available if you are looking for a fast and effective laser hair removal system, but few of them can match the versatility and performance of the Cynosure Elite MPX. In addition to being one of the top hair removal machines on the market today, the Elite MPX can also treat leg and facial veins, pigmented lesions and other conditions like rosacea and sun-damaged skin. It features two wavelengths with a 755nm Alexandrite laser and a 1064 nm Nd:YAG laser that can be sequentially emitted for faster and more effective results as compared to a single wavelength system.CYNOSURE ELITE MPX LASER APPLICATIONS:Skin rejuvenationLeg VeinFacial VeinLaser Hair RemovalVascular pigment lesionCYNOSURE ELITE MPX LASER FEATURES:Laser type: Alexandrite laser, Nd:YAG laserMaximum repetition rate: 1.5 Hz, 10 HzCooling system: Cold airSpot size options: 1.5 mm up to 18 mmAiming beam: RedWavelength: 755 nm, 1064 nmDimensions: 46" x 23" x 33.5"Weight: 298 lbs.Electrical requirements: 230 VAC/30A The Best of Both Worlds—Now Even Faster The Elite+ Aesthetic Workstation is built on two clinically proven wavelengths—the 755 nm Alexandrite and 1064 nm Nd:YAG lasers, which allow you to perform aesthetic laser treatments with unsurpassed efficacy and client comfort. Elite+ features larger spot sizes and higher fluences to deliver energy faster with exceptional results. Larger Spot Sizes and Higher Power for Faster Performance Reduce your procedure time with Elite+'s larger spot size. Our standard large 18 mm spot size gives you 44% more treatment area per pulse compared to standard 15 mm spot sizes. And now there are even larger spot size options - 20, 22, and 24mm. These optional large spot sizes help you perform your treatments even faster and increase your throughput! Nd:YAG technology with 755nm and 1064nm wavelengths quickly and effectively treats all skin types while delivering the years of reliable performance for which Cynosure is known. With Elite+, you have the flexibility to customize treatments to encompass all skin types. Variable spot sizes and pulse durations make Elite+ the natural choice to accommodate a range of specific skincare conditions. Deliver exceptional results across all skin types Easily switch between wavelengths for different treatments within a single session Air-cooling throughout treatments enhance patient comfort and satisfaction Longer pulse durations of up to 300ms precisely match the energy delivered in concert with thermal relaxation time Discover how the Elite+ aesthetic workstation treats a diverse patient base, while delivering long-term, reliable, and cost-effective performance. Cynosure Elite Plus 2018 system for with Zimmer Cryo Cooler unit. Very low usage Excellent condition Brand New flashlamps Very good performance characteristics Treatments to include: Laser Hair Removal for all skin types Leg Veins Facial Veins Rosacea Pigmented lesions Onychomycosis Related Since I started to feel so great, I wanted to upkeep the rest of my body and decided to try their laser hair removal. Initially I was hesitant but after my first laser hair treatment I was amazed that I had 80% reduction in hair growth! If you're familiar with laser hair removal you know it takes 6-8 treatments before you'll see those results! And some people don't see that much of a reduction resulting in more sessions. Elite has cut no corners in ensuring they have the best technology that'll revive your face and body. I couldn't be more pleased by my experience and will always entrust them with my beauty maintenance. Get rid of fine lines, acne scars, hyperpigmentation or unwanted hair with Elite iQ, a state-of-the-art laser system from Cynosure. Thanks to two unique wavelengths and SkinTel smart melanin reader technology, the Elite iQ is safe and effective for patients of all skin tones and hair textures. Elite iQ is a laser system that can perform many of the most-requested aesthetic treatments. Two wavelengths—a 1064 nm Nd:YAG and a 755 nm alexandrite—are employed separately or at the same appointment to achieve your goals. The Elite iQ platform is equipped with SkinTel smart melanin reader technology, the first and only FDA-cleared melanin reader. The SkinTel device assesses your levels of melanin (the pigment that gives skin and hair its color) to determine the optimal laser parameters for you, delivering faster, more accurate results. Elite iQ can address multiple skin concerns and conditions, as well as permanently reduce hair. The Elite iQ can achieve permanent hair reduction in only a few sessions. It targets a precise wavelength of light at the melanin in your hair follicles, heating the follicle until its ability to grow new hair is reduced or destroyed. By undergoing several laser hair removal treatments spaced 6-8 weeks apart, you can effectively reduce the thickness and density of hair almost anywhere on the body. For some people, the hair reduction is permanent; others will require follow-up sessions every 6-12 months. Elite iQ laser hair removal can be performed almost anywhere on the body, including the: Abdomen Arms Back Bikini area Chest Face Legs Neck Underarms As a solution for hyperpigmentation, Elite iQ emits precise pulses of light to clusters of melanin in the skin. The light causes the pigment particles to break up, be absorbed by the body and become less visible. You can treat: Age spots Benign pigmented skin lesions such as moles Cafe-au-lait macules Freckles Post-inflammatory hyperpigmentation (PIH) Melasma The Elite iQ device treats a wide array of skin concerns related to aging. The laser energy is converted to heat in the skin, triggering collagen and elastin production. Over time, the skin in the treated area becomes smoother, healthier and younger-looking. With a single treatment, you can achieve noticeably brighter skin; regular sessions spaced 6-8 weeks apart can gradually turn back the clock and help you achieve total skin revitalization. Benefits include: Firmer, tighter skin Reduced facial wrinkles, neck wrinkles and jowls Improved skin tone and texture Fewer dark spots and sunspots Elite iQ can treat most vascular lesions on the face and body. The laser heat breaks down the walls of a lesion's blood vessels, causing the blood to flow elsewhere and the veins to become less visible. Vascular lesions Elite iQ can treat include: Broken blood vessels Cherry angioma Port wine stains Spider veins Elite iQ can also improve chronic conditions such as rosacea, psoriasis and pseudofolliculitis barbae, painful ingrown hairs caused by shaving. The Elite iQ is equipped with SkinTel technology, the world's first and only FDA-cleared melanin reader. This revolutionary technology takes the guesswork out of establishing the best treatment settings for each patient, setting it apart from other laser systems on the market. Elite iQ's two wavelengths are each considered the gold standard for their intended purposes-removing skin imperfections, building new collagen and eliminating unwanted hair. Men and women of any age can be good candidates for this treatment. Elite iQ is safe for all skin types, including dark and tanned skin. Use it to address: Fine lines and wrinkles Mild skin laxity (looseness) Pigmentary issues Pseudofolliculitis barbae Rosacea Sun damage Unwanted hair Vascular lesions Note that laser hair removal may not be effective at removing very light hair, as there must be sufficient melanin in the hair follicle to be targeted. At your treatment session, you'll lie down on a comfortable treatment table and be given eye protection. Your provider will use the SkinTel melanin reader to obtain optimal settings for your treatment, then pass the Elite iQ laser handpiece over the area being treated. The sensation isn't painful, resembling a rubber band snapping against your skin. The process can take anywhere from 5 minutes to an hour, depending on the size of the treatment area. An Elite iQ treatment doesn't involve any downtime. During the 24 hours afterward, you may experience redness and mild swelling. Follow all aftercare instructions given by your provider; depending on the skin concerns you're treating, you may need to avoid sun exposure and wear sunscreen for the next few days. The cost of a single Elite iQ session depends on multiple factors, including the size of the area being treated, the provider you choose and your geographic location. According to the American Society of Plastic Surgeons, the average cost of laser hair removal in 2020 was \$389, while the average cost of non-ablative laser skin resurfacing was \$1,445. The Elite iQ device is a safe, effective solution for skin revitalization, pigmentary disorders, vascular lesions and other skin imperfections along with unwanted hair. Two optimal wavelengths work separately or together to treat a wide range of skin concerns, and the first-of-its-kind SkinTel melanin reader creates treatment protocols that exactly match your hair and skin type. Elite iQ requires minimal downtime and generates superior results in as little as one session. The number of treatments you'll need depends on the severity of the skin concern being addressed. In the case of laser hair removal, thick, coarse hair will require more sessions than thinner, lighter hair. For other indications, people with darker skin types may require more sessions than those with lighter skin, as the laser system uses gentler settings for highly melanated skin. Individual results will also vary according to your body's response to treatment. For most Elite iQ indications, you'll start seeing results a few weeks after treatment. For rejuvenation, hyperpigmentation or vascular lesion treatments, your skin needs a few weeks to build collagen or absorb shattered melanin particles or blood vessels. For hair removal, the treated follicles need 6-8 weeks to return to their growth phase. Elite iQ has an excellent safety profile. Possible side effects include redness, swelling, crusting or scabbing. By choosing a reputable provider, you minimize your risk of side effects caused by incorrect use of the device. In the modern beauty industry, advancements in laser hair removal technology have provided consumers with a variety of options. Today, we will compare four popular laser devices on the market: Alma Laser Soprano Ice Platinum, Candela GentleLASE Pro, Lumenis LightSheer Diode Laser, and Cynosure Elite Plus Laser. Each device has its unique advantages, catering to different client needs.1. Alma Laser Soprano Ice PlatinumThe Alma Laser Soprano Ice Platinum is an advanced laser hair removal device that utilizes multi-wavelength (755nm , 808nm , 1064nm) technology, effectively treating various skin tones and hair types. Its unique sapphire touch cooling system makes the treatment process more comfortable and nearly painless, making it ideal for those seeking a quick and efficient hair removal experience.Pros- Laser type: Diode laser- Change hand piece to get multi-wavelength for versatility, featured for hair removal- Best suitable for skin type I-IV, burn risk use on type VI- Sapphire Touch cooling with ultrasound gel, Comfortable treatment experience- Fast treatment times2. Candela GentleLASE ProCandela GentleLASE Pro is a classic long pulse 755nm Alexandrite laser and 1064nm Nd:Yag laser combined multifunctional platform for hair removal, skin rejuvenation, wrinkles, pigmentation, vascular lesions, etc. Its 755 nm wavelength most suitable for skin types I-III, meanwhile the 1064nm wavelength best for skin type IV-VI. Thus its work for all the skin tones. The GentleLASE Pro also features a DCD cooling system that significantly reduces discomfort during treatment.Pros- Laser type: Long pulse Alexandrite, long pulse Nd:Yag- Highly effective hair removal, pigmentation, vascular lesions, skin rejuvenation. - Suitable for all skin types, 755 best for I-III, 1064 best for IV-VI- Patent DCD non-touch cooling system, no ultrasound gel- Proven safety record3. Lumenis LightSheer Diode LaserLumenis LightSheer Diode Laser is renowned for its high energy output and rapid treatment sessions. It is particularly effective for large area hair removal with minimal skin damage. The LightSheer also incorporates unique cooling technology to ensure a comfortable experience.Pros- Laser type: Diode laser- High energy output for quick hair removal treatments- Featured big spot size vacuum handpiece suitable for large area hair removal- Sapphire Touch cooling with ultrasound gel, Comfortable treatment experience- Low risk of skin damage4. Cynosure Elite Plus LaserCynosure Elite Plus Laser combines Alexandrite and Diode laser technologies, offering flexible treatment options. Its dual-wavelength design allows it to target different hair types and skin tones, providing a personalized treatment experience.Pros- Laser type: Long pulse Alexandrite, long pulse diode laser- Dual-wavelength design for high flexibility- Featured on hair removal for skin type I-IV- Cool air cooling system, minimum uncomfortable treatment experience- Personalized treatment optionsConclusionChoosing the right laser hair removal device depends not only on technical specifications but also on individual skin tone, hair type, and comfort preferences during treatment. The Alma Laser Soprano Ice Platinum is ideal for those seeking a quick and painless experience; the Candela GentleLASE Pro is a classic and most advanced multifunctional effective choice; the Lumenis LightSheer Diode Laser is perfect for large area hair removal; while the Cynosure Elite Plus Laser offers flexible treatment options for diverse needs.When selecting a laser hair removal device, it's advisable to consult with professionals to make the most informed decision based on your unique situation. Regardless of which device you choose, the ultimate goal is to achieve smooth, hair-free skin, enhancing your confidence and beauty.
