Wilcom's first embroidery system was sold to Lion Bros for a bargain price of $120,000. At the time is was predicted only ten embroidery design systems will be needed to meet the global demand of embroidery designs. The Wilcom CED was the world's first desktop embroidery design system that pioneered the way for PC-based embroidery digitizing. Wilcom's patent stitch process revolutionized the industry. For the first time a digitizer could resize an embroidery design without having to redigitize the entire design again. Wilcom ES, the second generation of Wilcom digitizing software, is released. While DOS based, the Wilcom engineers had the foresight to design a Windows-like graphical user interface before Windows even existed. The release of Wilcom's Sirus generation software introduced the all-in-one object-based Wilcom .EMB file that allowed, for the first time, an embroidery designer to store their objects, stitches and artwork in a single editable file. A game changer! DecoStudio was the first Wilcom product release to include our industry-changing integration of CorelDRAW and began our long and close strategic relationship with Corel. Hatch Embroidery version 1 was released in 2016 and quickly became the number one choice for home-hobby embroiderers. Today Hatch is used in hundreds of countries and has sparked a new generation of passionate embroiderers. Wilcom formed a strategic partnership with Dahao, the world's number one manufacturer of embroidery controllers that power hundreds of embroidery machine brands around the world. Wilcom's WiFi-powered EmbroideryConnect is released allowing users to seamlessly send designs from EmbroideryStudio to any USB-powered embroidery machine wirelessly. Wilcom releases WilcomWorkspace, an online suite of embroidery tools to help production, customer service and sales teams view, resize, recolor and generate accurate stitch estimates for embroidery designs. Wilcom offers dongle-free access across all four product levels, with flexible purchase options available through a subscription model for the premium product.
