A key decision leader at the Federal Reserve has proposed a new path to registration with the central bank Tuesday—one that could, for the first time, unlock coveted privileges for crypto-focused financial institutions.

On Monday, Hyperliquid Improvement Proposal 3 (HIP-3) came into force, allowing permissionless, builder-deployed perpetual futures contract listings.

Blockchain security is the foundation and guarantee for the development of blockchain technology. Due to the complexity of blockchain systems, their security issues involve multiple aspects such as cryptography, consensus mechanisms, and network security. Common security threats include 51% attacks, smart contract vulnerabilities, private key leakage, etc. To ensure the security of blockchain systems, measures need to be taken from multiple levels such as technology, management, and law. With the widespread application of blockchain technology, blockchain security will become increasingly important and will attract more professional talents to engage in it.
