App-specific layer-1 chains that must build out their own validator set suffer from centralization issues and could face increased legal liability, Mehta said.

How to read: Breakouts often follow the existing trend but can occasionally reverse it. Estimate the price target by measuring the base width of the triangle and projecting it from the breakout point. A breakout upward in an uptrend is typically bullish, while a breakdown in a downtrend is bearish. To avoid false signals, use a 1%-2% filter before confirming a move.
