Comprehensive Guide to how to place a limit order on binance

According to a Bloomberg report on Friday, Li has partnered with Fenbushi Capital co-founder Shen Bo, HashKey Group CEO Xiao Feng, and Meitu founder Cai Wensheng to launch an Ether accumulation strategy through a Nasdaq-listed shell company. The project raised \$1 billion, which included \$500 million from HongShan Capital Group and \$200 million from Avenir.

Ether options' 25-delta skew surged to 14% on Thursday, a level rarely sustained and often linked to periods of heightened fear. Traders are paying a premium for put (sell) options, signaling that market makers remain uneasy about downside risks. Under normal market conditions, the skew typically fluctuates between -6%

and +6%.

More advanced traders may be inclined to consider selling covered calls. Covered calls benefit from overbought, parabolic rallies—if the rally stalls, you keep the premium; if price indeed explodes, your gains are capped but protected from a sudden selloff.

The price of Bitcoin soared to a new record high during Asia trading hours on nearly \$50 billion in trading volume over the last 24 hours, per data from CoinGecko. As bullish traders piled in pushing the price upward, almost \$100 million in short positions were liquidated in just one hour, according to CoinGlass. More than \$200 million in BTC shorts were turned into forced buyers in the last 24 hours.

The firm also offers Bitcoin and XRP-themed credit cards, all of which offer up to 4% back on purchases in instant crypto rewards.

If the price breaks above resistance while funding spikes and OI balloons, treat the breakout as suspect until the level is retested and holds. After the initial pop, healthy signs include funding cooling off and OI rebuilding on the retest. If, instead, open interest unwinds and price slips back below the level, the breakout likely failed.
