The introduction of Google's AI summaries has raised huge red flags for web publishers, however, as users are less likely to visit their sites if the information is extracted and provided up front. The issue is compounded by AI's tendency to hallucinate, and even provide dangerous answers based on flawed sources.

This rush to buy protection is noticeably changing the market and has caused the price of bearish bets to become more expensive than bullish ones, Melville explained. This trend, which started with Bitcoin, has now extended to Ethereum, indicating that Ethereum investors are becoming increasingly cautious.

If you want to move from ad hoc trades to a repeatable system, you need to build structure into how you use Grok 4. Start with historical-news reaction backtests: Use Grok 4 to pull past X-sentiment spikes for the token and match them with price reaction windows (one hour, six hours, 24 hours). Export the pairs and run a backtest that simulates slippage and execution costs; if average slippage exceeds the expected edge, discard that signal type.

Daily active addresses on BNB Chain hit an all-time high on Monday, as the network's native crypto token reached a new price record.

may be down 4.3% in October so far, but optimism around the month's historically bullish trend remains intact. Since 2019, Bitcoin's average October gain has been near 20%, with a median return of about 15%. While this year's performance currently lags, market participants are looking to macroeconomic policy shifts for potential fuel.

The index combines three components to capture overall market psychology: the Fear & Greed Index (reflecting macro mood and volatility), CoinGecko's up/down votes (reflecting retail sentiment) and a rolling normalization layer that aligns both in a one-year window.
