"In practical terms, this means HIVE is scaling production of Bitcoin much like a growth business scales output of a core product," he wrote. "Each incremental exahash increases daily production and revenue potential, while our HPC division provides a complementary revenue stream that grows with demand for compute power. "

Also, the candlesticks have started to show signs of extreme FOMO. A parabolic chart is already hyperbullish, but a parabolic chart in which the bodies of the latest candlesticks are moving faster than the support, is probably too good to be true. Common sense says there must be a correction for markets to find some balance.

Both Bitcoin and gold have seen significant price gains since the U.S. government shutdown began earlier this week.

“Summarize the white paper for [TICKER] into 8 bullet points: use case, consensus, issuance schedule, vesting, token utility, known audits, core contributors, unresolved issues.”

However, market conditions remain choppy with digital asset investment products seeing \$513 million in outflows last week following a Binance liquidity cascade on October 10 that triggered nearly \$20 billion in liquidations, including roughly \$16.7 billion in long positions, according to a CoinShares report.

This happened as the “fear” sentiment gripped markets, with nearly \$230 billion in value erased in a single day.
