“Dollar dominance is going to be the opportunity of Ethereum,” he said, adding this will be because of “everything becoming...tokenized.”

Bitcoin’s spot demand has been contracting over the past week, signaling a waning of retail interest, according to data from CryptoQuant.

Chainalysis attributed Russia’s surge in crypto adoption to two primary factors: a spike in large institutional transfers and the growing use of decentralized finance (DeFi).

“We can build, or architect, or code cyberspace to protect values that we believe are fundamental. Or we can build, or architect, or code cyberspace to allow those values to disappear. There is no middle ground. There is no choice that does not include some kind of building. Code is never found; it is only ever made, and only ever made by us.”

However, investors and companies are seeking to get ahead of the problem by urging the adoption of post-quantum cryptography standards before a sufficiently powerful quantum computer emerges.

At the network level, institutional staking could enhance security and protocol stability. However, it may spark concerns about centralization if large funds dominate validator roles. This could affect yields and governance balance. Grayscale’s staking-enabled ETPs will shape upcoming funds, influencing standards for transparency, risk disclosures, taxation and investor safeguards.
