How Grayscale's spot crypto ETPs are delivering staking yield to investors

Experts highlight a stark divergence between Ethereum's bearish options activity and bullish institutional inflows.

"In years past, stablecoins were used mostly to settle speculative crypto trades; as of the last couple years, they have become the fastest, cheapest, and most global way to send a dollar," the report said.

As Cointelegraph reported, crypto investment products showed strong resilience during last week's market turbulence, recording \$3.17 billion in inflows despite a major flash crash triggered by renewed US-China tariff tensions, according to CoinShares.

The spot volume delta metric, an indicator that measures the net difference between buying and selling trade volumes, reveals that net spot buying on exchanges remains negative, despite the recent attempts at recovery.
